Congrats gents. A heavy lift completed.

Now the worst that can happen is that it gets funded.

Hi David,

As far as I am aware Research.gov will only accept PDF files. The below snip is from the submission portal.

**File Instructions for References Cited:**

- Only one file can be uploaded
- Your file should **not** contain page numbers, as they will be added automatically by the system
- Accepted file types include: PDF
- Maximum file size permitted is 10 MB

Thank you,

**Subject:** RE: Genome Notes (FAIROS Genome Notes Grant)

Hi David,

In addition to this, on the References NSF requires that all authors be listed (no et al.)

## e. References Cited

Reference information is required. Each reference must include the names of all authors (in the same sequence in which they appear in the publication), the article and journal title, book title, volume number, page numbers, and year of publication. (See also Chapter II.D.2.d(iii)(d)) If the proposer has a website address readily available, that information should be included in the citation. It is not NSF's intent, however, to place an undue burden on proposers to search for the URL of every referenced publication. Therefore, inclusion of a website address is optional. A proposal that includes reference citation(s) that do not specify a URL is not considered to be in violation of NSF proposal preparation guidelines and the proposal will still be reviewed.

Proposers must be especially careful to follow accepted scholarly practices in providing citations for source materials relied upon when preparing any section of the proposal. While there is no established page limitation for the references, this section must include bibliographic citations only and must not be used to provide parenthetical information outside of the 15-page Project Description.

Thank you,

**Connor Pruente** | Grant Specialist
**Kansas State University** | Office of Sponsored Programs
103 Fairchild Hall, 1601 Vattier St. | Manhattan, KS 66506-2504

**Subject:** RE: Genome Notes (FAIROS Genome Notes Grant)

Thank you for confirming. I do not see a prior NSF support section. One is needed per the PAPPG, would you like to add one?

**(iii) Results from Prior NSF Support**

The purpose of this section is to assist reviewers in assessing the quality of prior work conducted with prior or current NSF funding. If **any PI or co-PI** identified on the proposal has received prior NSF support including:

- an award with an end date in the past five years; or
- any current funding, including any no cost extensions,

information on the award is required **for each PI and co-PI**, regardless of whether the support was directly related to the proposal or not. In cases where the PI or any co-PI has received more than one award (excluding amendments to existing awards), they need only report on the one award that is most closely related to the proposal. Support means salary support, as well as any other funding awarded by NSF, including research, Graduate Research Fellowship, Major Research Instrumentation, conference, equipment, travel, and center awards, etc.

The following information must be provided:

- (a) the NSF award number, amount and period of support;

  (b) the title of the project;

  (c) a summary of the results of the completed work, including accomplishments, supported by the award. The results must be separately described under two distinct headings: Intellectual Merit and Broader Impacts;

  (d) a listing of the publications resulting from the NSF award (a complete bibliographic citation for each publication must be provided either in this section or in the References Cited section of the proposal); if none, state "No publications were produced under this award."

  (e) evidence of research products and their availability, including, but not limited to: data, publications, samples, physical collections, software, and models, as described in any Data Management and Sharing Plan; and

  (f) if the proposal is for renewed support, a description of the relation of the completed work to the proposed work.

If the project was recently awarded and therefore no new results exist, describe the major goals and broader impacts of the project. Note that the proposal may contain up to five pages to describe the results. Results may be summarized in fewer than five pages, which would give the balance of the 15 pages for the Project Description.

Connor,

Molik Biosketch, COA, Current and Pending attached.

Did David L and Ryan include this grant on their C&P (NSF wants the grant you are submitting to be on the C&P)? If they haven't I am attaching a screenshot of what I used.

That should just leave the One Page Summary and Project Description.

Best,

Any edits you want before I run it up the chain?

The USDA, Agricultural Research Service (ARS) Knipling-Bushland US Livestock Insects Research Laboratory agrees to participate as a co-PI on the proposed research project you are submitting to NSF's Findable Accessible Interoperable Reusable Open Science program, entitled "Disciplinary Improvements: AI-Ready Genome Notes: An Open Science Infrastructure for Rapid, Structured Genomic Reporting".

Dr. David Luecke will collaborate with you, as outlined in Objectives 1, by: designing and implementing fully containerized NextFlow pipelines combining final assembly and annotation files with supporting sequence data to create a standardized, structured reporting framework for genome assemblies that produces machine-actionable genomic metadata at the time of publication, as described in the proposal.

**Subject:** Re: Genome Notes

Can do:

Working grant title is: Disciplinary Improvements: AI-Ready Genome Notes: An Open Science Infrastructure for Rapid, Structured Genomic Reporting

Your contributions would be in Aim 1:

**Aim 1: Develop a machine-actionable genome reporting framework**

Objective: Create a standardized, structured reporting framework for genome assemblies that produces machine-actionable genomic metadata at the time of publication.

The idea being that we'd work together to create the nextflow pipeline would generate the metadata table.

Working on writing the whole narrative, I'll send it your way as soon as I can.

Best,

--

**To:** Luecke, David - REE-ARS, TX <David.Luecke@usda.gov>; Saelao, Perot - REE-ARS <Perot.Saelao@usda.gov>
**Subject:** Re: Genome Notes

Perot,

I'm in the process of writing an NSF FAIROS grant due April 8 to build infrastructure around a Genome Note journal.

The model is rapid, structured genome reports rather than traditional narrative papers. Submissions follow a standardized format (assembly statistics, sequencing methods, annotation summary, links to ENA accessions, etc.). After a basic editorial check, the paper is posted online immediately and then undergoes open peer review (similar to PeerJ/F1000). Reviews and author responses are public, and once a manuscript passes review it becomes indexed in the usual places.

A key goal of the project is to make genome publications AI-ready by capturing these reports as structured, machine-readable data rather than purely narrative text. That allows genome assemblies and their metadata to be automatically aggregated, queried, and reused across large sequencing initiatives.

The advantage of this system is that it dramatically lowers the barrier for publishing genome assemblies coming out of large sequencing efforts like DToL, particularly where the goal is rapid dissemination and standardized reporting rather than a long interpretive manuscript. It also avoids the preprint → journal pipeline entirely (similar to PCI), though most existing platforms still charge an APC for external authors.

Mark Blaxter, who helped build the Wellcome Trust platform, and I have both been thinking that a Diamond Open Access genome note journal (free to publish, institutionally supported) would be a useful next step for the community. We could host something like this through our library publishing program at K-State, though DToL may also have infrastructure worth coordinating with.

Separately, Marc Halfon, a few others (including David), and I have been working on minimum data reporting requirements for genome notes. We have a manuscript coming together on that and David or I will share the draft once it's ready.

A major component of the grant would also be automation of the submission and reporting pipeline, and I think some of the tools that David is developing could fit naturally into that workflow.

From the administrative side, what I think I likely need is a Non-Funded Cooperative Agreement (NFCA) and a Letter of Support from ARS for the grant, so David can be key personnel. I think that we could also support the dissemination of the tooling beyond the genome notes journal.

Best,

--

We'd need to determine if this is a NFCA, CRADA, or if anything is needed at all. Your ORISE status makes things interesting…

It really comes down to if salary is needed (NFCA v. CRADA), and weather Perot could write the Letter of Collaboration for the grant without the NFCA.

**Subject:** Genome Notes

David,

Do you have a few minutes after the i5k Training Working Group meeting today?

I'm putting in a FAIROS grant for the Genome Notes ideas and I want to see if there is a way to bring you on in a subaward, I need to know if I should talk to Perot, I was thinking maybe we could pass through to ORISE, or we could possibly go through the ARS rigamarole of an agreement. Unless you can take it as freelance work.

Best,

--
