# K-STATE LIBRARIES
# UNCLASSIFIED EVALUATION PROCEDURES

## PART A
## GUIDELINES FOR PREPARATION OF PERFORMANCE PLAN

## PART B
## ANNUAL EVALUATION INSTRUCTIONS

## PART C
## PROCEDURES FOR BELOW STANDARD PERFORMANCE

## PART D
## PROFESSORIAL PERFORMANCE AWARD

## PART E
## POST TENURE REVIEW

**Purposes of Evaluation:**

Unclassified evaluations form the basis of decisions concerning annual merit salary, reappointment, tenure, and promotion. More than that, evaluations are a roadmap providing direction for faculty development. Evaluations provide documentation of past performance and accomplishments as well as finite future expectations. They are used to assess an individual's progress and to guide the growth of skills and expertise. This ongoing cycle of individual assessment and improvement aids in continuing productivity throughout the course of the individual's career as well as promoting consistency with the role and mission of the university and library.

## PART A

## GUIDELINES FOR PREPARATION OF PERFORMANCE PLAN

1. The Performance Plan is prepared at the beginning of the evaluation year (calendar), when the position description is reviewed, and a copy of both are submitted to the Administrative Office. Please see page 4 below for details.

2. Performance expectations reflect position description responsibilities, departmental goals and personal goals. They should support the Libraries' strategic plan, mission and/or vision. They should be specific, measurable in some manner, acceptable and realistic to both the individual and supervisor, and should be attainable.

3. For tenured and tenure track faculty, who will use these expectations to assist in tenure and/or promotion, performance expectations will address or include the traditional categories of directed service, non-directed service, and research/creative activities.

4. Each expectation should be given a weight of "high", "medium" or "low" to indicate its importance.

5. The individual prepares a draft Performance Plan document in collaboration with the supervisor. A final version of the Performance Plan is signed by employee and supervisor.

6. Progress will be reviewed regularly throughout the year, with a mid-year review at the minimum. Expectations may be modified as circumstances warrant, by mutual agreement. Modify Performance Plan or attach hand-written modifications to existing Plan and submit a copy to the Administrative Office.

7. Professional Conduct: In accordance with section D12 of the University Handbook, "Performance reviews of faculty and other unclassified employees will include consideration of overall contribution or detriment to the department/unit, which includes citizenship and other personal conduct affecting the workplace (see Section C46.1UH)".

## PART B

## ANNUAL EVALUATION INSTRUCTIONS

Below are the steps for completing your unclassified evaluation. Please complete these steps in the time frame indicated by the current Unclassified Master Calendar (located on K-State Libraries Intranet) and supervisor. For additional information, consult the University Handbook.

1. Employee completes self-evaluation addressing core responsibilities for the year as defined in the position description and the annual unclassified performance plan.

2. Supervisor completes evaluation determining the individual's merit salary category, according to K-State Libraries Standards for Evaluation, and reflected by the *final overall rating*. Please see page 3 for details regarding the standards for evaluation.

3. Supervisor shares evaluation with unclassified staff member.

4. Supervisor forwards evaluation materials to Library Administration through HR Office. "The dean will review evaluation materials and recommendations." (C47.1 UH). "A dean who does not agree with recommendations for merit salary increases made by a unit head must attempt to reach consensus through consultation. If this fails, the dean's recommendation will be used. If any change has been made the dean must notify, in writing, the individual of the change and its rationale." (C47.2 UH)

## STANDARDS FOR EVALUATION

| Performance Standards | Definitions |
|---|---|
| | |
| | |
| | |
| Exceptional | Recognized for excellence in core position responsibilities and Performance Plan expectations through awards, recognition, or written statements from K-State, from the Libraries, or from recognized professional organizations. Examples including but not limited to: implementation of workflows that save staff time/library resources/money or implementation of enhanced tools and services; cited or depended on as a regional or national authority; significant external funding on grants or targeted excellence; presentations at national/international conferences; publication of scholarly research; invited book reviews; national recognition for service to one's profession; significant service to the university and/or to the Libraries which supports the mission and goals of the organization; significant participation in state, national or international organizations |
| | |
| Exceeds Expectations | Meets all annual Performance Plan expectations and performs core position description responsibilities at an above standard level of performance. Examples including but not limited to: presentations at local/state/regional level; effective participation or leadership roles in library teams/committees; active participant on university, local, state or national professional organizations/committees; exploring the boundaries of one's role by contributing to librarianship or service to one's profession |
| | |
| Meets Expectations | Meets annual Performance Plan expectations. Standard level of performance of core responsibilities. Ability to work independently, as well as collaboratively. Examples including but not limited to: active participation on K-State Libraries teams/committees; attending relevant professional meetings/workshops; writing book reviews in non-scholarly, non-professional publications; collegiality/interpersonal skills that contribute to harmonious workflow and/or patron relations |
| | |
| Minimum Standard | Fails to meet one or more annual performance expectations or core responsibilities but capable of improvement |
| | |
| Below Standard | Fails to perform the requirements of most core responsibilities and annual Performance Plan. Lacks initiative. Poor decision-making and judgment skills. No active participation on teams/committees. Requires close supervision and/or direction to complete required tasks. Poor collegiality/interpersonal skills that disrupt harmonious workflow and/or causes poor patron relations. C31.5 (chronic low achievement) is invoked when a tenured faculty member receives a final overall rating that is below standard. |
| | |

## Weight Reference Key (Supervisor and Supervisee)

| Assigned Weight | Description of Weight | Impact on Evaluation |
|---|---|---|
| High | This area emphasizes a **High** level of commitment from the employee in either time, resources, or importance. Examples include but are not limited to: Publication, panel, major project, actions with a significant impact on the organization | **(Discussion between Supervisor and Supervisee)** |
| Medium | This area emphasizes a **Medium** level of commitment from the employee in either time, resources, or importance. Examples include but are not limited to: Standard workload/time commitment, normal project with no special time commitments or particularly heavy impacts, actions with notable impacts | **(Discussion between Supervisor and Supervisee)** |
| Low | This area emphasizes a **Low** level of commitment from the employee in either time, resources, or importance. Examples include but are not limited to: Projects with minor impact on the organization and no specific end date, actions with low impact, minor levels of committee involvement | **(Discussion between Supervisor and Supervisee)** |

**KANSAS STATE UNIVERSITY**
**UNCLASSIFIED PERFORMANCE PLAN AND EVALUATION**

NAME: David Molik YEAR: 2026
RANK: Associate Professor and Librarian
DEPT: Open Publishing Exchange
POSITION: Department Head and Lead Library Research Officer

| PERFORMANCE EXPECTATION | WEIGHT (high, medium, or low) | RATING From standards for Evaluation |
|---|---|---|
| **PROFESSIONAL CONDUCT** | | |
| Interact cooperatively with colleagues, show civility and respect to others with whom you work and interact, show respect for the opinions of others in the exchange of ideas, and demonstrate a willingness to follow appropriate directives from supervisors (C46.1 UH) | High | Meet Expectations |
| **DIRECTED SERVICE** | | |
| Core responsibilities | High | Exceeds Expectations |
| Lead and coordinate Libraries research initiatives, support grant development, and foster research collaborations as Library Lead Research Officer. | High | Exceeds Expectations |
| Participate in professional development activities related to library science. | Medium | Meets |
| Supervise and mentor OPE faculty and staff; support professional development (e.g., grant leadership, national committee participation). | Medium | Meets |
| Build models for a research center concept integrating compliance, publishing, data, and AI infrastructure. | Medium | Meets |
| **NON-DIRECTED SERVICE** | | |
| Represent Libraries in national research organizations | High | Exceeds Expectations |
| Contribute to national conversations on scholarly communication infrastructure. | Medium | Meets |
| Contribute expertise to community-led efforts advancing open research data, metadata standards, and interoperable scholarly infrastructure. | Medium | Exceeds Expectations |
| **RESEARCH/CREATIVE** | | |
| Provide editorial leadership for scholarly publications. | High | Exceeds Expectations |
| Establish a data-driven scholarly communication research lab to study the production, dissemination, and impact of research through large-scale analysis of scholarly data. | Medium | Meets |
| Develop research agenda connecting undergraduate publishing participation with student outcomes (multi-institutional framework). | Low | Meets |

David C. Molik Digitally signed by David Molik Date: 2026.10.16 15:03:59 -04'00'
Signature of Unclassified Employee/Date

*FINAL OVER-ALL RATING: Exceeds Expectations

* For tenured faculty, a final overall rating of BELOW STANDARD leads to the implementation of section C31.5 ("Chronic Low Achievement" of the KSU University Handbook. See Part D.)

**Unclassified Self-Summary**
(Must be typed)

Each unclassified employee is required to complete self-summary. Continue any section on additional sheets of paper.

NAME: Molik, David YEAR: 2026

Academic Rank: Associate Professor and Librarian
Job Title: Department Head and Lead Library Research Officer
Dept: Open Publishing Exchange

Performance Expectations / Core Responsibilities:
Assess performance of duties as outlined in the annual Performance Plan and the position description.

My goal as Head of OPE is to build scholarly communication services the Libraries can sustain. I understand sustainability as financial support for our commitments, operational practices that share responsibility, maintainable technical infrastructure, and research that helps us assess and improve our work. These concerns connect publishing, repositories, open education, and research-data services.

Network building supports this work across the department, campus, and professional communities. My focus is on turning relationships and ideas into shared practices that help researchers, students, and colleagues. The sections below describe that work against each UPP expectation and reflect on what I am learning from it.

## Professional Conduct

**Interact cooperatively with colleagues, show civility and respect to others with whom you work and interact, show respect for the opinions of others in the exchange of ideas, and demonstrate a willingness to follow appropriate directives from supervisors (C46.1 UH)**

**Weight:** High.

I approach leadership as collaborative work in which colleagues' expertise, judgment, and ownership are visible. In OPE, this means seeking agreement about responsibilities, giving substantive feedback, and coordinating decisions with colleagues and supervisors. My proposal mentoring, student-role planning, and delegation of departmental representation reflect this approach. I want colleagues to have both the support and the authority needed to carry their work forward.

**Lessons learned:** Cooperative leadership requires clear expectations as well as openness to other views. I am learning to make the transition from discussion to responsibility more explicit: who will decide, who will carry the work forward, and when we will revisit it. Timely consultation and direct communication help turn collegial relationships into dependable working arrangements.

## Directed Service

**Core responsibilities**

**Weight:** High.

My central work as Head of OPE is to bring publishing, repositories, open education, and research-data services into a coherent departmental program. The June OPE Landscape develops the direction established in the 2025 departmental plan and connects service priorities with staffing, funding, technology, and partnerships. Explaining that direction through departmental presentations and the website planning process is part of helping colleagues and campus partners understand what OPE offers and how its services fit together.

Across these areas, I work on the conditions that allow services to continue: publishing agreements and author guidance, open-textbook support, repository policy and development, and platform and preservation choices.

Examples include Textbook 2.0 fundraising, the Fungal Genetics Reports platform transition recommendations, Pressbooks analysis, and DataCite and CLOCKSS coordination. My publication-reporting work with OVPR and Libraries colleagues also helps develop a clearer picture of campus research activity. These efforts connect practical service needs with the Libraries' longer-term responsibilities for access and stewardship.

**Lessons learned:** Sustainability depends on financial, operational, technical, and intellectual support working together. A promising platform or service idea needs a manageable scope, assigned responsibility, and people prepared to maintain it. The website planning work has reinforced the value of giving colleagues ownership of their service content while coordinating shared departmental decisions. My priority is to carry that clarity into everyday service workflows.

**Lead and coordinate Libraries research initiatives, support grant development, and foster research collaborations as Library Lead Research Officer.**

**Weight:** High.

As Library Lead Research Officer, I help connect the Libraries with research initiatives while there is still room to shape data stewardship, publication, staffing, and costs. This work involves developing relationships, identifying opportunities, bringing collaborators together, and helping turn an initial idea into a project that partners can evaluate. The formal agreement for this role provides a basis for proposal development, scoping, writing, and budgeting.

My work has included defining an OPE data-support component with Cassandra Olds and convening colleagues around an IUSE educational-research concept. At Jeff Sheldon's request, I also prepared an operating-model workbook for the Sunderland Innovation Lab to examine its services and how they could connect more closely with the university's research enterprise. I delivered that planning analysis in August; it was a contribution to Jeff's work rather than an operational role in Sunderland. Additionally, ongoing work on the NSF IUSE effort, and follow on conversations on Gwen Sibley’s Purdue University site visit show a continued growth in this area.

The Sunderland workbook maps existing fabrication, AI, immersive technology, visualization, media, equipment, and outreach services to possible research-support roles. For example, routine fabrication assistance could support a pathway to research prototyping, while media facilities could help researchers communicate methods and findings. I identified possible student and graduate-organization contacts and recommended written procedures, training, competency checks, and escalation routes. The purpose was to make service coverage and research support sustainable while keeping professional accountability clear. This work taught me that integrating a lab into the research enterprise requires explicit service boundaries and handoffs as well as promising technology.

**Lessons learned:** Research development is most useful when collaborators share an understanding of the question, responsibilities, and resources before committing to delivery. My disciplinary experience helps me recognize the discovery, metadata, reproducibility, and reuse problems researchers face; the library contribution becomes clearer when I explain how a service addresses those problems. I want to deepen that connection through research profiles and Wildcat Scholar, building on earlier committee service and identifying specific contributions with campus partners.

**Participate in professional development activities related to library science.**

**Weight:** Medium.

I have developed my foundation in library science through professional reading (going so far as to write a personal crawler for new Scholarly Communication articles of interest), webinars, participation in the Coalition for Networked Information (CNI) and Library Publishing Coalition (LPC) conferences, and learning alongside library colleagues. These experiences help me connect my disciplinary research background with the professional responsibilities of a library: access, stewardship, preservation, scholarly communication, and service to varied communities. CNI discussions help me place local infrastructure decisions in a wider institutional context, while LPC engagement and journal reading give me ways to examine library publishing practices with peers.

**Lessons learned:** My professional connection to librarianship grows when I apply what I learn to shared work. Working with Gwen Sibley on data-curation workshops has given me a practical setting for connecting research methods with library support for description, sharing, and reuse. Publishing-platform, repository, and preservation discussions with colleagues likewise help me consider continuity, accessibility, and service responsibilities alongside technical capabilities. I am learning to ask how a proposed tool fits a library service and whom that

service needs to support. I will continue building this foundation through reading, webinars, professional communities, and candid conversations with library colleagues.

**Supervise and mentor OPE faculty and staff; support professional development (e.g., grant leadership, national committee participation).**

**Weight:** Medium.

I supervise and mentor OPE colleagues by helping clarify responsibilities, providing substantive feedback, and supporting opportunities to develop expertise and leadership. My work supporting Gwen Sibley's William T. Grant proposal illustrates this approach: I contributed advice on the research question, methods, evidence, and sponsor fit while supporting her ownership of the project. Student-role planning similarly brings meaningful work together with a primary librarian mentor and increasing responsibility.

Remote supervision makes deliberate communication and shared context especially important. I use OPE department meetings and one-on-one conversations to discuss priorities, surface concerns, and follow up on responsibilities. The OPEnhouse reboot (previously Tea With CSP) provides another setting for colleagues and students to connect around the department's work; welcoming our new students through OPEnhouse is one concrete example. I am also developing a clearer Teams channel strategy, a general department chat, as well as a faculty only chat, with the OPE Teams space used for intermediate documentation, so colleagues can distinguish shared discussion, project coordination, and information that needs a lasting departmental home. These practices support a departmental culture in which people can find information and ask for help without relying on informal proximity.

**Lessons learned:** I recognize that being remote means I need to be intentional about availability, listening, and follow-through. A meeting or message is useful only if colleagues leave with a shared understanding of what happens next. I need to use one-on-ones to invite concerns that may not surface in a group, use department meetings to establish shared priorities, and make decisions and responsibilities visible in Teams. The reappointment feedback has also prompted me to reflect on how a caring supervisory approach can become too conciliatory. I want to retain that care while addressing challenges earlier and seeking candid advice from Tara and trusted colleagues. My next step is to make expectations, decisions, and follow-up more consistent across these settings.

**Build models for a research center concept integrating compliance, publishing, data, and AI infrastructure.**

**Weight:** Medium.

I am developing models for research support that connect compliance, publishing, data management, and AI infrastructure. The OPE Landscape, proposal scoping, and regional AI hub discussions provide different settings for considering how these responsibilities could fit together. My Sunderland analysis offered a related service-planning example: distinguishing routine access and support from specialized research consultation helps identify the people and resources a service requires.

The OAK-AI Hub support-cost analysis brings research-data management, reporting, and evaluation assumptions into a shared planning model. The Olds proposal similarly helps define a library contribution and its staffing requirements. In the Sunderland workbook, I proposed formalizing trained student participation in scheduling, routine assistance, and established demonstrations, with professional staff retaining responsibility for safety, advanced work, and research partnerships. These are planning recommendations, not claims that a new staffing or service model has been implemented.

**Lessons learned:** Integrated services require explicit handoffs and governance. Bringing functions together in a proposal does not settle who maintains them or how continuing work is supported. I am learning to make service scope, costs, staffing, and responsibility visible early so partners can decide what they can sustain.

## Non-Directed Service

**Represent Libraries in national research organizations**

**Weight:** High.

My participation in national research organizations connects the Libraries with communities developing the standards, infrastructure, and training that researchers use. Through i5k executive and training leadership,

AgBioData steering and sustainability work, and my Bioeconomy Information Sharing and Analysis Center advisory relationship, I contribute a perspective that spans disciplinary research and scholarly communication.

This service includes convening colleagues, developing educational programs, and working on the sustainability of shared resources. The i5k education discussions and exploration of a virtual institute, along with AgBioData sustainability leadership and future workshop planning, extend relationships into shared work. AgBioData's Mission and Leadership Award recognized my contribution to that community. Institutional governance work, including LFPS participation, complements these external roles.

**Lessons learned:** Representation is most valuable when relationships lead to responsibilities and exchange of expertise. These communities help me understand needs that OPE will also encounter, while library experience contributes to their discussions of access, stewardship, and continuity. I am learning to focus my participation where that exchange can support lasting work.

**Contribute to national conversations on scholarly communication infrastructure.**

**Weight:** Medium.

I contribute to conversations about how scholarly work is reviewed, published, and made accessible through participation in Genome Notes discussions, Peer Community in Genomics, and cyberbiosecurity peer-review activities. These settings let me examine publishing practices from the perspectives of researchers, reviewers, and library publishers.

This engagement helps inform OPE's thinking about publishing options and the infrastructure needed to support them. Community review models are particularly relevant to questions about access, editorial responsibility, and the costs of scholarly communication.

**Lessons learned:** Publishing practices depend on communities as much as platforms. Reviewing and participating in these discussions helps me see how governance, incentives, and expectations affect whether a model works for its users. I bring those questions back to library publishing and author-support work.

**Contribute expertise to community-led efforts advancing open research data, metadata standards, and interoperable scholarly infrastructure.**

**Weight:** Medium.

I contribute expertise to community-led work on open research data, metadata standards, and interoperable scholarly infrastructure through i5k, AgBioData, and increasingly, Great Plains Network. Scientific-literature and genome-nomenclature work connects my disciplinary experience with broader questions about how information is described, linked, and reused. Presenting the AgBioData research coordination network to the Research Data Alliance is one way I help connect these communities.

These activities inform OPE's work on identifiers, repositories, preservation, and research-data services. They also provide a way to contribute library concerns about access and stewardship to standards discussions grounded in researchers' everyday practices.

**Lessons learned:** A standard becomes useful through shared understanding and adoption. Technical consistency matters, but so do the explanations, working relationships, and maintenance arrangements that let communities use it. This has reinforced my attention to documentation and interoperability in local service development.

## Research and Creative Activity

**Provide editorial leadership for scholarly publications.**

**Weight:** High.

My editorial work supports venues and practices through which scholarly communities share and assess research. I continue editorial leadership in Cyberbiosecurity Quarterly and serve as a guest editor for Cyberinfrastructure and Data Management in Ecology and Evolution. My Peer Community in Genomics work, including the ViroSeek recommendation, adds experience with a community-based review and recommendation model.

These roles connect scholarly judgment with the practical work of library publishing. They help me understand what authors, reviewers, and editors need from publishing services and how editorial coordination supports a credible, accessible publication process.

**Lessons learned:** Sustaining a scholarly venue requires continuing attention to its community and workflow. Editorial responsibility includes helping a process move forward while maintaining standards and clear communication. This experience informs how I think about OPE's relationships with journals and the support needed behind a publication.

**Establish a data-driven scholarly communication research lab to study the production, dissemination, and impact of research through large-scale analysis of scholarly data.**

**Weight:** Medium.

I am building a research program around how scholarship is produced, discovered, disseminated, and reused. Publication reporting provides an immediate library setting for this work: HAIL, HAIL-local, and Prairie Observatory support collecting, organizing, and examining scholarly records. Developing these methods raises research questions about source coverage, affiliation, provenance, and how measures can inform library and campus decisions. The lab remains in development.

My disciplinary scholarship and research software contribute methods and experience to this agenda. Arthropod and biodiversity genome standards work, FAIR-data scholarship, AgBioData coordination, Barcode Simulator, and PathwayByWire involve related questions about reproducibility, description, and reuse. Seed support and proposals such as Genome Notes, Ag-DEx, FFAR, and K-FORGE have provided opportunities to develop research questions and partnerships around data and publishing infrastructure, with different funding outcomes.

**Lessons learned:** Building tools is one part of building a research program. The more important task is to define questions that connect the tools, retain reproducible methods, and explain what the findings can tell us. Publication reporting has particularly reinforced the importance of understanding missing data and source limitations before interpreting a measure. I want to use that experience to develop studies that connect scholarly-data methods with library choices and researcher needs.

**Develop research agenda connecting undergraduate publishing participation with student outcomes (multi-institutional framework).**

**Weight:** Low.

I am developing a research agenda on what students gain from participating in scholarly communication and how library publishing can support that learning. The OPE student pathway provides a practical setting for thinking about meaningful work, mentoring, reflection, and increasing responsibility. Course concepts in scholarly-communication research methods and knowledge graphs provide related curriculum ideas.

My IUSE work on maker-based learning has also given me experience in framing an educational-research question and developing a design with collaborators. The specific multi-institutional publishing-and-student-outcomes agenda is at an early stage; its next steps are to define the publishing experience, research questions, and potential partners.

**Lessons learned:** A worthwhile student experience and a study of that experience require different kinds of planning. To understand outcomes, I need to identify what students might learn and how to examine it from the beginning. This is shaping how I connect program design with research and how I approach conversations with potential institutional partners.

## Reflection and priorities

The strongest lesson across this year's work is that sustainable services depend on shared responsibility. Plans, platforms, and partnerships become useful when people understand their role and have the resources and confidence to carry it forward. That lesson connects my departmental leadership, supervision, research development, and professional service.

I am also working to make the connection between my disciplinary expertise and library practice easier to see. Research experience helps me understand the problems researchers face; library colleagues and professional learning help me shape responses that fit our responsibilities and capacity. Continuing that learning, strengthening direct supervisory communication, and defining a coherent scholarly-communication research agenda are priorities for my development.

The reappointment feedback also asks me to communicate my work more clearly. In this evaluation, I have organized the account around the UPP and kept supporting evidence close to the relevant work. As I revise the

wider portfolio, I will continue attending to concise summaries, dates, clear descriptions of my role, five-year goals, and colleague proofreading so the presentation helps reviewers understand the substance.

## EVALUATION COMMENTS

MANDATORY FOR SUPERVISOR (S)

David Molik (Name of person evaluated) 2026 (Year)

Comments on the Year's Performance:

**Directed Service**

David and the OPE team have focused on developing operationally sustainable scholarly communication services for the Libraries. His scientific background has helped him establish connections beyond traditional library communities and engage with research networks that present new opportunities for collaboration and potential external funding.

His work reflects a progression from establishing OPE as a department to more intentionally connecting the Libraries with the university's broader research enterprise. Beyond strengthening existing programs, he has pursued new opportunities in research data, publishing, scholarly communication, and research and data infrastructure.

His appointment as Library Lead Research Officer has created an important connection between the Libraries and the university's research enterprise. I've been in more than one meeting where the Vice President for Research has referenced the Libraries' grant application growth (over $10 million for FY 26) and David as an example for campus. While staff have submitted grants in the past, his guidance will help us build a stronger grant-seeking culture across the organization.

David worked remotely for about the last half of the year and made deliberate efforts to stay connected with his department and colleagues throughout the Libraries and on campus. I appreciate how intentional his communication and community-building have been.

Recommendations for the future
Scholarly communication is important and complex. If someone isn't working in it daily, it can feel confusing and overwhelming, especially given the rapid changes in academia and the federal government. David is a good communicator, and I encourage David to continue to strengthen communication skills, especially when explaining complex or highly specialized ideas to audiences outside the field, e.g.: The Nelson Memo. An important goal is to translate technical issues into clear language that helps colleagues understand what the work is, why it matters, and how it connects to the Libraries' and university priorities. A good metric is: could a 10-year-old (or Tara) understand it?

**Non-Directed Service**

David has maintained substantial involvement in national service, including leadership and advisory roles with i5k, AgBioData, and the Bioeconomy Information Sharing and Analysis Center. These activities extend the Libraries' presence into research communities beyond traditional library space, while providing communities in which he can apply Scholarly Communication practice.

Receiving the AgBioData Mission and Leadership Award provides external recognition of his work in research data and open scholarship. It also creates visibility for the Libraries' involvement in research data, scholarly infrastructure, and open scholarship. Congratulations!

Recommendations for the future

Given the amount of activities David is involved in, it's important for him to periodically take stock of existing commitments before accepting additional ones. The goal is not to limit new opportunities, but to ensure that time and energy remain focused on activities with the greatest impact and that the overall portfolio he is building remains sustainable. I believe David can be easily frustrated when projects and initiatives hit roadblocks, and keeping multiple projects going at once as a way to compensate for frustrations. David is an asset to the library, and as more library-wide initiatives and strategies require his involvement, he should recognize that he, too, needs a work-life balance.

**Research and Creative Activity**

David has continued his research and creative activity while providing editorial leadership for several scholarly publications. This work provides direct experience with different stages of the scholarly communication cycle and offers perspectives that can inform OPE's publishing services and the Libraries' broader scholarly communication work.

His emerging undergraduate research agenda is particularly notable for bringing students into conversations about scholarly communication. Connecting this work with ALE could create opportunities to explore how undergraduate participation in research and publishing contributes to the student experience at K-State.

**Tenure and promotion feedback**

David devoted significant attention to organizing his evaluation and tenure portfolio. He considered feedback carefully and made substantive revisions in response, resulting in a clearer and more reflective presentation of his work.

Consultation Acknowledgment

I have had the opportunity to review the evaluation document and discuss it with the evaluator(s) for the above stated rating period.

| | |
|---|---|
| _____ | David C. Mobik 10-16-26 |
| Signature of Immediate Supervisor Date | Signature of Unclassified Employee Date |

**EVALUATION COMMENTS** (CON'T)

Comments by person evaluated: (Optional)

I appreciate Tara's thoughtful evaluation and recognition of OPE's development and the Libraries' growing role in the university's research enterprise. I particularly value the feedback on communicating specialized issues clearly and maintaining a sustainable portfolio of commitments. Going forward, I will make the practical implications and connections to institutional priorities more explicit when communicating scholarly communication issues, and periodically review commitments in relation to their impact, available capacity, and departmental priorities.

I appreciate the observation about balancing commitments and recognize that frustration with stalled projects can sometimes contribute to my interest in pursuing new opportunities. However, my intention in simultainously pursuing multiple initiatives has also been to build complementary collaborations and advance work as timelines and dependencies permit, with clear reasonable timelines. I will be more deliberate about assessing capacity before adding commitments and making my priorities and the connections among initiatives clearer, while taking my health into account.

## PART C

## PROCEDURES FOR BELOW STANDARD PERFORMANCE

Below standard performance is addressed for Faculty on Probationary Appointments (C50.1 UH), Unclassified Administrative Appointees (C170.3 UH), and Instructors (C60 UH) through the yearly reappointment procedures. The following procedures, for tenured faculty only, are in compliance with Sections C31.5-C31.8 ("Chronic Low Achievement") of the University Handbook. These sections address the "chronic failure of a *tenured* faculty member to perform his or her professional duties," defined as "when a tenured faculty member's *overall* performance falls below the minimum acceptable level, as indicated by the annual evaluation." Within K-State Libraries, C31.5 is invoked when a *final overall rating* falls below standard.

I. Supervisor's Responsibilities:

A. When a *rating of Below Standard* is given for *any job dimension*, the supervisor must:
   1. Consult with the faculty member about the reason(s) for the poor performance.
   2. Work with the faculty member on a course of action to correct the performance level (see C31.7 UH).
   3. Meet with the faculty member within six months of a *Below Standard* rating to evaluate progress.

B. When the *final overall rating* is *Below Standard*, the supervisor must:
   1. Indicate so in writing to the faculty member.
   2. Indicate, in writing, a suggested course of action to improve the performance of the faculty member.
   3. Meet with the faculty member within six months of a *Below Standard* rating to evaluate the progress.

C. When the *final overall rating* is *Below Standard* for any subsequent annual evaluation following the supervisor's suggested course of action, the supervisor must:

   1. Forward the name of the faculty member to the Dean and Assistant/Associate Dean (and Department Head if supervisor is not same) using the Below Standard Consultation Memo of the unclassified annual evaluation form.

II. Faculty Member's Responsibilities:

A. When a *rating of Below Standard* is given for any job dimension, the faculty member must:
   1. Consult with their supervisor about the reason(s) for the poor performance.
   2. Work with their supervisor on a course of action to correct the performance level (see C31.7 UH).
   3. Meet with their supervisor within six months of a Below Standard rating to evaluate progress.

B. When a faculty member's *final overall rating is Below Standard*, he/she must:
   1. Report to the supervisor and the Dean and Assistant/Associate Dean (and Department Head if supervisor is not same) on activities aimed at improving performance.
   2. Provide evidence of improvement in subsequent annual evaluations.
   3. Meet with their supervisor within six months of a Below Standard rating to evaluate progress.

C. When a faculty member does not want eligible departmental faculty (tenured faculty of equivalent rank or above) to have input into any decision on their case, he/she must so

request via a letter to the Dean. This request must be made within 10 working days following receipt of a letter from the Dean indicating that the faculty member is being reviewed for dismissal under the provisions of C31.5 of the University Handbook.

III. Dean's Responsibilities:

A. When a faculty member has two successive evaluations *Below Standard,* dismissal for cause will be considered at the discretion of the Dean. Within 10 working days of the Dean's receipt of notice from the supervisor (see I.C above), the Dean must notify the faculty member in writing that he/she is being reviewed for dismissal under the provisions of C31.5 of the University Handbook.

The decision whether or not to proceed with dismissal for cause must be conveyed to the faculty member, in writing, within 30 days of the Dean's receipt of the faculty member's letter regarding eligible departmental faculty input (see II.C above).

B. When a faculty member has three evaluations *Below Standard* in five years, dismissal for cause will be considered at the discretion of the Dean. Within 10 working days of the Dean's receipt of notice from the supervisor (see I.C above), the Dean must notify the faculty member in writing that he/she is being reviewed for dismissal under the provisions of C31.5 of the University Handbook.

The decision whether or not to proceed with dismissal for cause must be conveyed to the faculty member, in writing, within 30 days of the Dean's receipt of the faculty member's letter regarding eligible departmental faculty input (see II.C above)

C. The Dean must seek input from eligible departmental faculty (tenured faculty of equivalent rank or above) regarding any decision concerning the faculty member in question unless the faculty member requests otherwise via a letter to the Dean (see II.C above).

## Below Standard Consultation Memo

TO: Dean of K-State Libraries
CC: Assistant/Associate Dean of K-State Libraries
CC: Department Head (if not supervisor)

The following unclassified employee's *final overall rating* for evaluation year _____ was BELOW STANDARD.

Faculty member: _____

Supervisor: _____

Date:_____

## PART D
## PROFESSORIAL PERFORMANCE AWARD

**Significance of the Award.** The Professorial Performance Award rewards strong performance at the highest rank with a base salary increase in addition to that provided by the annual evaluation process. The Performance Award review, it is important to note, is not a form of promotion review. It does not create a "senior" professoriate. Furthermore, the Professorial Performance Award is not a right accorded to every faculty member at the rank of Professor. Nor is it granted simply as a result of a candidate's routinely meeting assigned duties with a record free of notable deficiencies. (Section C49.1 UH)

**Criteria:**

1. The candidate must be a full-time professor and have been in rank at least six years since the last promotion or professorial performance award. (Section C49.2 UH)
2. The candidate must show evidence of **sustained** productivity in at least the last six years before the performance review. (Section C49.2 UH)
3. The candidate's productivity and performance must be of a quality comparable to that which would merit promotion to professor according to **current** approved departmental standards. (Section C49.2 UH)
4. In the last six years the candidate must have received a minimum of four annual overall assessments for faculty performance of 'exceptional' or 'exceeds expectations'.

**Procedure:**

1. The faculty member will provide the following supporting materials which will form the basis of adjudicating eligibility of the award.
   a. Copies of annual evaluations for each year since the last promotion or professorial performance award.
   b. Copy of a current vitae.
2. The Department Head reviews the supporting materials and prepares a written recommendation.
3. The recommendation and supporting materials are forwarded to the Dean and Assistant/Associate Dean of Libraries at the same time as the annual evaluation is forwarded.
4. The Dean of Libraries reviews recommendation and supporting materials and prepares a written recommendation.
5. Approved Professorial Performance Awards are forwarded to the Provost.

## PART E

## PROCEDURES FOR POST-TENURE REVIEW

**Introduction** The purpose of post-tenure review at Kansas State University is to enhance the continued professional development of tenured faculty. The process is intended to encourage intellectual vitality and professional proficiency for all members of the faculty throughout their careers, so they may more effectively fulfill the mission of the university. It is also designed to enhance public trust in the university by ensuring that the faculty community undertakes regular and rigorous efforts to hold all of its members accountable for high professional standards.

Kansas State University recognizes that the granting of tenure for university faculty is a vital protection of free inquiry and open intellectual debate. It is expressly recognized that nothing in this policy alters or amends the University's policies regarding removal of tenured faculty members for cause (which are stipulated in the *University Handbook [UH]*). This policy and any actions taken under it are separate from and have no bearing on the chronic low achievement or annual evaluation policies and processes.

The department policy on post-tenure review follows the overarching purpose, principles, objectives, and procedures in the university policy on post-tenure review, which was approved by Faculty Senate on February 11, 2014. (*UH* Appendix W)

**Criteria:**

1. The faculty member must be a tenured member of the faculty. Post-tenure review will be conducted every six years, or in the sixth year following promotion or awarding of a major university performance award. Certain substantial national or international awards, and the five year review of department heads and administrators may reset the post-tenure review clock. Faculty members who have formally announced their retirement, or have begun phased retirement are exempt from post-tenure review. (*UH* Appendix W Section 2.e.)
2. The faculty member must show evidence of professional competencies of duties appropriately associated with his or her position based on position descriptions and unclassified professional plans in the last six years before the performance review. (*UH* Appendix W Section 1.ii.)

**Procedures**

1. The faculty member will provide the following supporting materials which will form the basis of the review:
   a. Copies of previous six annual evaluations for each year since tenure, or the last promotion, or major award requiring multi-year portfolio-like documentation.
   b. The Post-Tenure Review Evaluation Form summarizing the six years of evaluation ratings.
2. The supervisor reviews the supporting materials and prepares a written recommendation on the Post-Tenure Review Evaluation Form. At a minimum, the post-tenure review should assess the faculty member's strengths and areas for improvement to determine whether he or she is making appropriate contribution to the University or whether additional plans or activities need to be developed.
3. The faculty member shall be given a copy of the review.
4. The supervisor meets with the faculty member to review the recommendation.
5. The recommendation and supporting materials are forwarded to the Dean of Libraries at the same time the annual evaluation is forwarded.
6. The Dean of Libraries forwards a summary of post-tenure reviews to the Provost.
