Quick recap

The AgBioData Steering Committee meeting covered updates on publications, including the status of the database paper and the submission of the NSF annual report. The group discussed USDA publication arrangements for working groups with international members, agreeing that it would be helpful to submit these proactively. Monica explained the process for using the RCN grant's no-cost extension funds, soliciting ideas from working groups. The Education Working Group's revival and plans for MOOCs and new training materials were presented. The committee discussed merging the Grant Writing Working Group into the Sustainability Working Group to formalize its structure. The process for recruiting new SC members was outlined, with a call for nominations planned for September. The webinar schedule was updated, and participation in upcoming conferences like SACNAS and CANVAS was discussed. Finally, the planning for the upcoming External Advisory

Committee (EAC) meeting was initiated, with tasks assigned for scheduling and preparing the presentation.

Next steps

David

- [ ] Contact John to discuss directing the sustainability workshop at PAG in a more productive way for AgBioData.

Leonore

- [ ] Re-upload the figures at 300 DPI for the database paper and move it to the next phase.
- [ ] Update the form for SC nominations and set a deadline of September 21st for nominations.

Marcela

- [ ] Send an email to working group chairs early next week with the spreadsheet for NCE project ideas.
- [ ] Draft an email to the SC about the proposed October EAC meeting dates and get feedback before sending to EAC members.
- [ ] Create a new Google Doc for EAC Year 6 planning and meeting notes.
- [ ] Prepare the presentation for the EAC meeting by gathering slides from working groups and SC.

Naithani

- [ ] Reach out to Parul Gupta about potential interest in joining the SC.

Olivia

- [ ] Ask Lydia Tressel about potential interest in joining the SC.

Sunita

- [ ] Follow up with the USDA about the international publication arrangement for the single cell working group.

Taner

- [ ] Send a Doodle poll to EAC members to schedule the October EAC meeting.

- [ ] Work with Marcela to define and create a new membership form for databases and affiliated organizations.

Collaboration

- [ ] All SC members: Update their calendars with vacation time and inform the group if they will be away.
- [ ] Working Group Chairs: Submit project ideas for the NCE funds via the spreadsheet sent by Marcela.
- [ ] Working Groups with international members: Consider submitting the USDA international publication arrangement form proactively if planning to publish.

Summary

Research Team Updates and Decisions

The team discussed several key updates and decisions during their meeting. Leonore confirmed that the NSF annual report was successfully submitted and is available for review in the shared drive, with a 30-day window for any necessary corrections. The group addressed USDA publication requirements, with Taner clarifying that while research collaboration agreements are being developed, the current focus should be on completing the simpler international publication arrangements form, rather than waiting for the more complex formal agreements. Monica provided an update on the no-cost extension of their RCN grant, explaining that they received an additional year of funding with extra funds available for specific projects, and outlined a process for working groups to submit proposals for how to use these funds. The Education Working Group was revived with 9 members and will hold its kickoff meeting on September 11th, focusing on evaluating and potentially improving existing educational materials including developing additional videos and MOOC courses. The group also discussed merging the Grant Writing Working Group with the Sustainability Working Group, with plans to formalize this combination and elect a new champion to lead the combined effort.

AI Research and Committee Elections

The group discussed how AI is changing research project approaches, with Sunita explaining that AI enables faster and more efficient workflow processing of large datasets while still requiring expert curation and model training. The main focus then shifted to SC rotation committee elections, with the group identifying potential candidates including Jennifer Clark, James Koltes, Fiona McCarthy, Parul Gupta, Nick Gladman, Lydia Tressel, and Irene Cobo-Simón. The team agreed to set a September 21st deadline for nominations and decided to promote the open positions through an upcoming

webinar and newsletter, with a goal of having at least three candidates including a mix of early career researchers and experienced scientists.

AgBioData Membership Process Updates

The team discussed updates to AgBioData membership processes and forms. They agreed to enhance the candidate statement requirements for the steering committee nominations, with Sunita suggesting an essay format to better assess candidates' motivations and expertise. Naithani and Marcela reviewed the database registration form, identifying the need to distinguish between different types of database members and evaluate criteria beyond agricultural science relevance. The group clarified that a new membership form is needed to distinguish between individual participants, working group members, and formal database organizations, with Taner agreeing to rename the current form as a "new database membership form."

AgBioData Event Planning Updates

Marcela provided updates on upcoming events and presentations for AgBioData. She confirmed speakers for September through December, including NLP for biocreation in November and Swish Makat presenting on glycans in December. The team decided not to participate in the Global Bioinformatics Education Summit in India but will attend SACNAS from October 28-31. Marcela also discussed plans for the PAG conference, including booking a booth at a discounted price and offering two free exhibitor registrations. The group debated representation at the CANVAS meeting, with Naithani expressing interest in attending due to its focus on soil and hemp science, though the deadline for abstract submission was noted as September 23rd.

AgBioData Membership and Advertising Strategy

The group discussed advertising AgBioData at the CANVAS meeting, with Sunita confirming they could present a poster and brochures. Naithani proposed creating a new database membership form that would include not just databases but also members from libraries, policy organizations, and publishers. Leonore suggested developing a landing page with different membership options including individual members, member databases, and affiliated organizations, with plans to clarify these distinctions in the bylaws. The conversation ended with birthday wishes for David, who received a rejection notice from USDA NIFA as a gift.

EAC Meeting Planning Discussion

The team discussed planning for the External Advisory Committee (EAC) meeting, which needs to be scheduled for October. Marcela will create a TODO list in JIRA to track planning tasks, starting with sending a Doodle poll to EAC members to determine available dates and times that work for

participants across different time zones. The team agreed to use a Google Doc instead of JIRA for better collaboration on planning details.

October Meeting Planning Discussion

The team discussed planning for an upcoming meeting in October, deciding to extend it from one hour to two hours to allow adequate time for presentations and discussions. They agreed that the agenda would include welcome remarks, presentations, internal EAC discussion, and Q&A sessions with the AgBioData SC. Marcela volunteered to prepare the presentation, noting that Anarita had handled it previously by gathering work from different working groups.

EAC Implementation Presentation Planning

The team discussed preparing a presentation for year 6, focusing on reviewing and implementing EAC (Executive Advisory Committee) suggestions from the previous year. Marcela will gather slides and create a draft presentation, including specific accomplishments from working groups that addressed EAC recommendations. The team agreed to create one slide for each EAC suggestion, showing what was recommended and how it was implemented, with working groups providing 2-3 summary slides of their accomplishments. They plan to schedule the presentation for October and will send a brief email to the SC to confirm the timing, giving themselves about 4 weeks to complete the presentation materials.

Thursday, July 23, 2026

Quick recap

The steering committee meeting focused on the NSF RCN annual report, with Marcela updating the document and Leonor discussing the participant and product spreadsheets. Carson presented a citation tracking tool using public APIs and Colab, which the group discussed for potential use with AgBioData and other databases. The ASPB meeting was debriefed, with Marcela, Sunita, and Olivia sharing positive outcomes from the workshop, booth, and networking opportunities. Upcoming meetings at SACNAS and PAG were discussed, along with the need for promotional materials like brochures and stickers. The Education and Training Working Group kickoff was planned for late August or early September. The group also briefly touched on the status of a submitted paper and the upcoming webinar series.

Next steps

Carson

- [ ] Put the citation tracking tool on GitHub and consider making a Jupyter notebook version.
- [ ] Run the citation tracking tool for AgBioData publications and provide results for the NSF report.

Marcela

- [x] ~~Send a poll to schedule the kickoff meeting for the Education and Training Working Group, targeting the first week of September.~~
- [x] ~~Ensure webinar hosting access for leonorereiser for the August 5th webinar, possibly by adjusting two-factor authentication settings.~~

Sunita

- [ ] Introduce the NCBI speaker (Emily) for the September webinar.
- [ ] Contact potential speakers for future webinars.

Leonore

- [x] ~~Test uploading the updated participant spreadsheet to Research.gov.~~
- [ ] Print more generic AgBioData postcards for upcoming meetings (SACNAS, Global Sorghum Conference).
- [ ] Look into printing stickers for various databases to distribute at conferences.

Collaboration

- [x] ~~Monica and Leonore: Follow up on the funding prioritization discussion and document.~~

Summary

NSF RCN Annual Report Review

The steering committee meeting focused on reviewing the NSF RCN annual report, with Marcela leading the discussion on updating the document and associated spreadsheets. Leonor provided guidance on the Research.gov upload process and suggested assigning specific sections to different team members, particularly highlighting the need for quantitative evaluations and survey results. The team agreed to divide responsibilities for completing the report, with Carson offering to review the impact section and team members volunteering to take on specific sections of the document.

Automated Citation Tracking Tool Demo

Carson demonstrated a new automated citation tracking tool he developed using Claude that can analyze paper citations and generate reports similar to Dory's previous work. The tool can process PubMed IDs and DOIs, search for specific terms using regular expressions, and provide metrics on direct citations, journal mentions, and patent citations. Carson offered to implement this tool for ARS databases and generate reports for the current grant priorities, while ensuring he doesn't duplicate Dory's existing work.

Citation Report Tool Development

Carson presented a tool for generating citation reports and discussed making it available on GitHub, with the ability to search for specific DOIs or PubMed IDs. The group discussed potential implementations, including creating a Jupyter notebook version and possibly integrating it with AgBioData to analyze citations of their publications. Marcella suggested using the tool to analyze how AgBioData is cited in publications, potentially for inclusion in reports or as a demo on the AgBioData website. Sunita proposed expanding the tool into a database finder for AgBioData to help other databases track statistics.

PUI Workshop and Networking Event

Marcela reported on a productive two-day meeting where she participated in a PUI workshop as a panelist and promoted their curriculum. The team had a well-located booth that attracted many new visitors, and their workshop at BioData drew about 60 attendees despite Tanya's challenging travel. Marcela also attended discussions about international research collaborations and shared insights about new rules affecting science, noting the need for comments on proposed amendments.

Plant Biology Event Feedback Report

Sunita reported on the Plant Biology statistics, noting 1,200 attendees from 43 countries and highlighting the success of their workshop and booth despite many attendees being unfamiliar with AgBioData. She suggested increasing engagement through more demonstrations and tutorials, particularly for graduate students and postdocs. Marcela mentioned gaining contacts for curriculum development and noted the need for more promotional materials from different databases, while Sunita emphasized the importance of creating a full AgBioData brochure for future events like SACNAS.

Conference Planning and Logistics

The team discussed upcoming conferences and events, including SACNAS and PAG meetings. They agreed to prioritize these conferences and consider their impact on bringing people to their field. Marcella will launch the Education and Training Working Group in September after returning

from vacation. The group also addressed logistics for upcoming webinars in August and September, including handling technical issues with two-factor authentication. They concluded by planning to follow up on funding decisions and prioritization of remaining grant funds.

Thursday, June 25, 2026

Meeting summary

Quick recap

The meeting focused on discussing how to allocate the remaining budget and one-year no-cost extension for the AgBioData consortium. Monica presented a budget report showing >$200K in unspent funds across various categories including conference budgets (70K), salary (50K), consulting (47K), travel (20K), publication costs (5K), and participant costs (42K). The group discussed priorities for Aim 1 (working groups and community development) and Aim 3 (education and training), with Sunita suggesting expanding the education focus from FAIR data to AI-ready infrastructure. Olivia proposed hiring a software developer to make database scripts interoperable and suggested summer internships for MCP server development and bio-curation work. The team agreed to create a targeted wish list from working group chairs, with each group providing three concrete ideas including price tags and timelines. They also discussed potential activities including grant writing support, software development, database exchange fellowships, and conference participation, while noting the need to move some funds between cost categories to maximize impact within the one-year extension period.

Next steps

Marcela

- [ ] Email all authors of the manuscript (including Anarita and Leonore) about the revision deadline, request they review and provide suggestions by July 4th, and coordinate with Anarita and/or Leonore to contact the editor to request a deadline extension to mid-July if needed.
- [ ] Send manuscript and response-to-reviews documents to all authors, asking for feedback and confirmation of correct affiliations, with a deadline of July 15th for all comments.
- [ ] Send an email to the AgBioData mailing list (and include in the newsletter) with a link to the new Education and Training working group web page and sign-up form, inviting interested members to join.

- [ ] After collecting responses from interested members, send a poll to determine the best date/time for the Education and Training working group kickoff meeting, targeting the second week of September.
- [ ] Update and circulate the annual report template, highlighting sections that need updates, and set an internal deadline for completion (target end of July/early August).
- [ ] Do not advertise new awards (champion, ambassador, education) in the newsletter until budget decisions are finalized; announce the no-cost extension in the newsletter but avoid emphasizing unspent funds.

Monica

- [x] ~~Send notes/highlighted action items to Marcela for consolidation and follow-up.~~

Olivia

- [ ] Provide statistical/metrics support for the manuscript revision as needed.

Sunita

- [ ] Volunteer to participate in the Education and Training working group.

Collaboration

- [ ] All Working Group Chairs: Provide to Marcela (or designated coordinator) a prioritized list of 1-3 concrete, budgeted proposals (with price tags and timelines) for activities/projects that could be funded within the next year, focusing on items requiring budget support.
- [ ] Monica (with input from Lenore/Connie): Review and clarify the current budget status, especially regarding participant costs and the process for reallocating funds between budget categories if needed, and communicate updated budget guidance to the group.
- [ ] Sunita and Naithani: Attend the Plant Cell Atlas Core Network meeting in St. Louis, gather relevant ideas for AgBioData sustainability and future activities, and report back to the group.
- [ ] All interested members: Sign up for the new Education and Training working group and respond to scheduling poll when distributed.
- [ ] All authors of manuscript: Review the manuscript and provide comments/suggestions by the set deadline (July 4th or as updated).
- [ ] Anarita and/or Leonore: Contact the journal editor to confirm or request a revised manuscript submission deadline.

Summary

Project Fund Utilization Planning

Monica reported that the project has significant unspent funds, including almost $200K in non-participant costs, conference budget savings from lower in-person attendance, and various other underspent categories totaling about $42K remaining. She noted that Aim 1 is progressing well with active working groups and community engagement activities, while Aim 2 and Aim 3 are experiencing challenges due to policy shifts affecting reporting requirements and project scope. The current grant period was extended by one year, and the team is now planning how to utilize the available funds for the extended period ending in August.

Project Progress and Tools Development

The team discussed progress on various aims of their project, noting that no one has applied for stipends or recruited faculty yet, which represents a gap that needs addressing. Dori has completed quantitative assessments of member genomics databases and developed a Python-based TRACE tool for citation analysis, though the code is not yet publicly available and needs to be formalized into a white paper. The team agreed to use the available no-cost extension funds to push these aims toward completion over the next few months, with a focus on finalizing the database assessments and making Dori's tools more accessible to others.

AI Training for Database Personnel

Naithani discussed expanding the focus of the education and training group to include AI-related training for AgBiodata database personnel, rather than just promoting existing fear education materials. Naithani noted that the current fear materials have limited adoption due to their relevance to undergraduate and graduate students rather than PIs and database professionals. The group proposed creating short videos about database functionality for member databases to host, with the goal of developing a comprehensive training and outreach platform that would be more appealing to researchers.

FAIR to AI Infrastructure Transition

The group discussed transitioning from FAIR data principles to AI-ready infrastructure, with Sunita emphasizing the need to move beyond traditional FAIR terminology to include machine discoverability, API enablement, and computational reproducibility. Olivia proposed budgeting for software developers to help create interoperable scripts and platforms on AgBioData, particularly for MCP servers and NLP group work. The discussion concluded with a debate between using volunteer working group members versus hiring dedicated part-time contractors for technical development work.

Database Software Development Challenges

The team discussed challenges and potential solutions for developing database software, with Naithani explaining that current development with dedicated paid software takes months rather than days. Sunita raised concerns about hiring part-time developers and the expertise required, while Olivia emphasized the need for stable code architecture that can communicate between different databases, noting that biological expertise isn't necessary for this technical aspect. Monica suggested identifying existing soft-money researchers who could be subcontracted, as this might be more feasible than going through a full hiring process with the available funding.

Summer Internship Funding Priorities

The team discussed brainstorming ideas for summer internships and funding priorities. Sunita suggested creating a comprehensive wish list of potential achievements if sufficient funding were available, then analyzing overlaps and efficiency across working groups. Marcella proposed targeting working group chairs to gather their top three funding priorities with specific price tags and timelines, focusing on concrete one-year initiatives rather than broader objectives. The group agreed to review existing wish lists from working groups and potentially use AI tools to analyze overlaps and suggest the most effective uses of limited funding.

Funding Utilization Planning Discussion

The team discussed potential uses for their funding, including organizing exchange fellowships between database groups and conducting grant writing sessions. Naithani proposed supporting 2-week exchanges between different database teams, while Olivia suggested sending presentations about AgBioData to databases in Europe to gauge interest in membership. The group also considered using funding for dedicated grant writing work under ambassadorships, with Naithani requesting support for 15 days of intensive work. Sunita emphasized the need to plan how to use the money effectively, particularly given concerns about sustainability and the requirement to spend funds by August of next year to avoid losing the remaining budget.

Funding Allocation and Sustainability Planning

The group discussed how to use their funding, with Sunita suggesting ways to keep their working group sustainable for 3-4 years through publishing and grant writing. Naithani proposed allocating $5,000-6,000 for publishing three papers from multiple working groups and potentially funding ambassador awards or on-site meetings. Monica explained that about half the funding is currently in participant costs, and suggested moving some funds to other cost categories, though this would result in losing approximately $10,000 due to overhead fees. The group confirmed they will have an ASBB booth and discussed the possibility of participating in the Global Bioinformatics Education

Summit in Ahmedabad, India, though they noted the lack of agriculture representation in the current working groups.

Summit Planning and Budget Discussion

The team discussed the structure and format of an upcoming summit, with Marcela clarifying that it functions more like large working groups rather than traditional meetings. The group reviewed budget allocations, noting approximately $40K available for participant costs and discussing potential reallocation between different funding categories including championships, ambassadors, and conference attendance. Olivia suggested starting stakeholder outreach in October to allow time for November meetings, and the team agreed to aim for November as a deadline for deciding between in-person versus hybrid format for the AgVia data meeting.

Project Team Expansion Planning

The team discussed potential new perspectives and ideas for their project, focusing on identifying postdocs and team members like Doreen, Jennifer Clark, Lydia Tressel, Irene Kobo, and Cecilia Chang who could contribute. Sunita mentioned an upcoming extensive discussion at the Plant Cell Atlas Core Network meeting in St. Louis from July 8-10 where they will explore extending their plant cell atlas group and gather new ideas. The team also briefly discussed manuscript comments, with Sunita noting that they are waiting for Anarita's feedback before proceeding with further revisions.

Paper Revision Timeline Discussion

The team discussed updating their paper based on new working group data and surveys, with Sunita suggesting they should defend their current work rather than pursue a different article format. They determined that approximately three weeks had passed since their initial submission, with a likely deadline around July 15th for resubmission of an article with minor revisions. The group agreed they needed to contact Anarita and regarding her involvement in the revisions; Leonore will be unavailable until July 4th due to being at ICAR/personal time.

Manuscript Revision Timeline Discussion

The team discussed a manuscript revision deadline, clarifying that it's classified as minor revisions with a 4-week deadline, making the due date July 3rd rather than July 15th. They agreed that Marcela would contact all authors to review the manuscript and provide feedback by July 4th when Lenore returns, with a target submission date of July 11th. The group also decided to pause advertising for awards in the newsletter and to announce the no-cost extension of their grant activities until August 31st, 2027.

Project Deliverables and Working Group

The team discussed updating project deliverables and set an unofficial deadline of end of July for completion, with Marcela noting her absence from July 31 to August 11. They clarified that the current deliverable is an annual report for NSF, not a final project report, with the actual final report due in 2027. The group agreed to name the new working group "Education and Training" and decided to schedule the kickoff meeting for the second week of September, after Sunita's availability in Texas for the Global Sorghum Conference. Marcela will create a webpage for the group and promote it through the newsletter and AgBioData mailing list.

Thursday, May 28, 2026

Quick recap

The AgBioData Steering Committee meeting focused on welcoming new member Olivia Haley, discussing steering committee elections, and reviewing various working group updates. The group addressed the need for new steering committee members, with Leonore explaining that Peter Selby and John had stepped down, leaving gaps that need to be filled through upcoming elections. Marcela agreed to announce the call for nominations at the next webinar, and the team discussed expanding representation to include more animal scientists and international participants. The meeting covered updates on webinars, with Gaurav scheduled to present next week, and the annual meeting report being prepared for submission to PCI Genomics. The group also discussed website improvements, grant writing efforts including potential NSF EPSCoR funding, and the need to update the Ambassador Award application deadline from March 31st to September 1st. Additionally, the team explored ideas for generating income through training modules and certification programs, though legal and structural considerations need to be addressed before implementing such initiatives.

Next steps

David

- [ ] Follow up with Doreen to confirm her plans regarding the 2027 FAIROS grant.

Leonore

- [x] ~~Contact Olivia to resubmit her Ambassador Award application with an abstract for the ASPB conference.~~

Marcela

- [ ] Make the announcement for the call for nominations for the Steering Committee elections during the webinar on next Wednesday.
- [x] ~~Share the bio and email of Gaurav Moge with Naithani for the upcoming webinar.~~
- [ ] Update the website to make the curriculum and other products more visible, based on Jody's suggestions.
- [ ] Contact individuals (e.g., John, Emily) to help fill in descriptions for missing topic areas in the Steering Committee roles document.
- [x] ~~Create a folder for the NSF Final Summary Report and model it after previous reports.~~
- [x] ~~Reach out to Emily to serve as a reviewer for the Ambassador Award applications and share the SOP and application responses with her.~~
- [x] ~~Update the Ambassador Award application deadline on the website to September 1st.~~
- [x] ~~Put the idea of generating income through training modules on the agenda for the Sustainability Working Group meeting.~~

Naithani

- [ ] Add Raja Majumdar's name and email to the webinar document for consideration as a future speaker.

Summary

New Steering Committee Member Welcome

The meeting began with welcoming Olivia Haley, a new member of the steering committee who works with Maze Genetics and Genomics Database on AI implementations in genetics and genomics. Sunita mentioned Olivia's recent award for community workshop work and her involvement in the SC NLP Biocuration Group. The meeting also touched on the AI in biology conference currently taking place, with Sunita noting that while there are few agriculture-focused talks, the conference provides informative content on gene regulation and expression. The discussion concluded with a brief mention of upcoming steering committee elections, though no further details were provided.

Committee Recruitment Challenges Discussion

The group discussed recruitment challenges for their committee, with Peter Selby having stepped down and John also leaving his position. Jennifer Clark was approached but declined due to department funding issues, leaving them short of their target of 10 members. The team agreed they need to plan for new elections in 2027, with Leonore having previously handled most of the election setup and documentation. Monica suggested broadcasting the nominations to the entire consortium rather than just the current group.

Steering Committee Election Planning

The group discussed plans to announce a steering committee election process, with Marcela agreeing to make the announcement at next Wednesday's webinar. They debated whether to conduct nominations now or wait until the fall, considering the July hiatus and August resumption of meetings. The team discussed expanding the candidate pool by reaching out to additional databases and networks, including the PhytoCam group and a newly funded COST action called Harvest led by Isabella Colas.

Webinar Planning and Updates

Marcela provided updates on upcoming webinars, noting that there is a hiatus in July but upcoming speakers include Gaurav and Mackenzie Mabry from Florida Museum of Natural History. Naithani suggested adding Raja Majumdar as a potential speaker to discuss glycans, and agreed to provide his contact information to Marcela. The team also discussed organizing the webinar playlist on YouTube, with Olivia helping to explain how to reorder the videos.

Project Updates and Initiatives Discussion

The team discussed updates on several ongoing projects and initiatives. David reported progress on the annual meeting report, which will be submitted to PCI Genomics with potential for further academic publication. Marcela provided updates on ASPB activities, including advertising their presence on LinkedIn and proposing to present the educational curriculum at a PUI workshop. The group discussed website improvements, with suggestions to make the curriculum more visible and implement better search functionality, noting that funding is available for website consulting through Dory's group. The team also addressed grant writing efforts across multiple funding opportunities including Sloan Foundation and conference grants, with plans to review the NIFA AFRI NOFO when it's released. regarding the education working group, they decided to revive it as a focused group on education curriculum implementation rather than general outreach, with plans for bi-monthly communications featuring different working groups.

NSF EPSCoR Grants Overview

David explained various EPSCoR-only grants available through NSF, including ERISE, ECORE, and FAS programs, noting they require coordination with state EPSCoR offices and have different deadlines. Marcela mentioned maintaining a folder for new funding opportunities and workshop summaries, while Monica confirmed there's a template available for creating the NSF final report. The team discussed adapting content from the PCI genomics report for the NSF final report, with Leonore clarifying that there's a specific form required and the need to potentially request a no-cost extension.

Training Program Revenue Opportunities

The team discussed potential revenue-generating opportunities for training and certification programs, with Naithani proposing to develop online modules that could be offered through platforms like Coursera with associated fees and certifications. The group acknowledged legal and structural challenges around implementing such programs under the AgBioData Consortium, with Leonore noting the need for proper entity structure to handle payments. The team agreed to explore options including reaching out to Heidi Imker from University of Nebraska for guidance and investigating how other institutions handle charged training events, with Marcela committing to add this topic to the sustainability working group agenda.
